

Detailed Contents

About the Authors	xiii
Preface	xiv
Acknowledgments	xix
PART I. DESCRIPTIVE STATISTICS	1
1. Introduction to Statistics: What Are You Getting Into?	3
What Is Statistics?	3
What Is Our Approach to Statistics?	4
Practical Details Before We Can Move On	5
<i>A Short Discussion of Rounding</i>	5
<i>Buying an Appropriate Calculator</i>	6
Summary	7
2. Getting Started With Statistics	8
Basic Terminology	9
Descriptive Versus Inferential Statistics	12
Statistical Notation	14
Measurement Scales	17
<i>Examples of Each Measurement Scale</i>	18
<i>Overview of Measurement Scales</i>	20
Summary	20
Chapter 2 Homework	22
3. Frequency Distributions and Graphing	25
Frequency Distributions in Table Format	26
<i>Problem With Simple Frequency Distributions</i>	27
<i>A Solution to the Problem: Guidelines for</i>	
<i>Grouping Scores Into Categories</i>	27
<i>Specific Instructions for Creating</i>	
<i>a Frequency Distribution</i>	28

<i>More Complete Frequency Distribution Tables</i>	30
Graphing	31
<i>Graphing Basics</i>	31
<i>Types of Frequency Graphs</i>	32
<i>Shapes of Frequency Distributions</i>	36
Summary	38
Chapter 3 Homework	39
4. The Mean and Standard Deviation	42
Measures of Central Tendency	43
<i>The Mean</i>	43
<i>The Median</i>	45
<i>The Mode</i>	47
<i>Choosing the Best Measure of Central Tendency</i>	48
Measures of Variability	48
<i>Range</i>	48
<i>Variance and Standard Deviation</i>	50
Symmetry	59
Skewness and Kurtosis as Quantifiable Descriptive Statistics	61
Summary	62
<i>Excel Step-by-Step: Step-by-Step Instructions for Using Microsoft Excel 2003 or 2007 to Run Descriptive Statistics</i>	62
<i>SPSS Step-by-Step: Step-by-Step Instructions for Using SPSS to Run Descriptive Statistics</i>	64
Chapter 4 Homework	66
5. The Normal Distribution, Standardized Scores, and Probability	69
Normal Curve	70
Standardized Scores	72
Probability	81
<i>More Formally: Theoretical and Empirical Probability</i>	82
<i>Probability Notation</i>	83
Summary	84
Chapter 5 Homework	87
PART II. INTRODUCTION TO HYPOTHESIS TESTING	89
6. Sampling Distribution of the Mean and the Single-Sample z Statistic	91
How Are Sampling Distributions Created?	92
Single-Sample z Statistic	97

Summary	99
Chapter 6 Homework	100
7. Inferential Statistics	102
How Are Samples Randomly Selected?	103
Hypothesis Testing	104
<i>Critical Level of Probability</i>	105
<i>Types of Errors</i>	106
Power	108
<i>What Affects Power?</i>	109
<i>How Do You Calculate Power?</i>	111
<i>Demonstration of Power</i>	111
Effect Size	113
Parametric Versus Nonparametric Tests	113
Summary	114
Chapter 7 Homework	115
8. Single-Sample Tests	118
Single-Sample z Test	119
Single-Sample t Test	126
Confidence Intervals: A Valuable Use of the Single-Sample	
t Test Formula	136
<i>Usefulness of Confidence Intervals</i>	139
Effect Sizes and Power	139
<i>Other Resources for Calculating Power</i>	140
Summary	140
Chapter 8 Homework	141
9. Two-Sample Tests	145
Paired t Test (Correlated Groups t Test)	146
Paired t Test Calculation	147
Independent t Test	159
<i>Sampling Distribution of the Difference Between</i>	
<i>the Means</i>	160
<i>Estimating Variance From Two Samples</i>	160
Power and Two-Sample Tests: Paired Versus	
Independent Designs	172
Effect Sizes and Power	173
<i>Other Resources for Calculating Power</i>	174
Summary	174
<i>Excel Step-by-Step: Step-by-Step Instructions for</i>	
<i>Using Microsoft Excel 2003 or 2007 to Run t Tests</i>	174

<i>SPSS Step-by-Step: Step-by-Step Instructions for Using SPSS to Run an Independent t Test</i>	177
Chapter 9 Homework	179

PART III. ADDITIONAL HYPOTHESIS TESTS 183

10. Analysis of Variance (ANOVA) 185

Why Do We Need the ANOVA?	186
<i>What's Wrong With Numerous Pairwise Comparisons?</i>	186
The ANOVA Solution	187
<i>Properties of Your F-Obtained Value</i>	191
<i>Calculating an F-Obtained Value</i>	193
Characteristics of the <i>F</i> Distribution	195
Multiple Comparisons	206
<i>Planned (A Priori) Comparisons</i>	206
<i>Unplanned (A Posteriori) or Post Hoc Comparisons</i>	208
<i>Q Distribution</i>	209
Effect Sizes and Power	212
<i>Other Resources for Calculating Power</i>	213
Summary	213
<i>Excel Step-by-Step: Step-by-Step Instructions for Using Microsoft Excel 2003 or 2007 to Run ANOVA</i>	213
<i>SPSS Step-by-Step: Step-by-Step Instructions for Using SPSS to Run a One-Way ANOVA</i>	216
Chapter 10 Homework	218

11. Complex ANOVA Designs 223

What Is a Factorial Design?	224
How to Analyze Two-Factor Designs and Interactions	224
<i>What Is an Interaction?</i>	225
<i>Applying the Two-Way ANOVA Concept to Our Hesitation Time Example</i>	225
<i>Linear or Additive Equation</i>	226
<i>What Would the Data and the Analysis Look Like?</i>	228
Multifactorial ANOVA	242
<i>Linear or Additive Equation Applied to the Multifactorial ANOVA</i>	242
Repeated-Measures ANOVA	243
Summary	246
Chapter 11 Homework	247

12. Correlation and Regression 251

General Overview	252
Correlation	255

Pearson's <i>r</i> Correlation Coefficient	255
<i>Interpreting the Correlation Coefficient</i>	256
Linear Regression	260
Standard Error of the Estimate	264
Multiple Regression	268
<i>Linear or Additive Equation for</i>	
<i>Multiple Regression</i>	270
Effect Sizes and Power	270
<i>Other Resources for Calculating Power</i>	270
Summary	270
<i>Excel Step-by-Step: Step-by-Step Instructions</i>	
<i>for Using Microsoft Excel 2003 or 2007 to</i>	
<i>Run Correlation or Regression Analyses</i>	271
<i>SPSS Step-by-Step: Step-by-Step Instructions for</i>	
<i>Using SPSS to Run a Correlation</i>	272
<i>SPSS Step-by-Step: Step-by-Step Instructions for</i>	
<i>Using SPSS to Run a Regression</i>	273
Chapter 12 Homework	275
13. General Linear Model	279
Linear or Additive Equation/Model	280
ANOVA/t Test	280
Two-Way ANOVA	281
Three-Way ANOVA	281
Repeated-Measures ANOVA	282
Multiple Regression	282
<i>Comparing Two-Way ANOVA to</i>	
<i>Multiple Regression</i>	283
<i>Assumptions of the General Linear Model</i>	283
Application of the General Linear Model Approach	283
SPSS Example	285
Analysis of Covariance (ANCOVA)	287
Summary	288
Chapter 13 Homework	289
14. Nonparametric Tests	290
Chi-Square	291
<i>Calculation of Expected Values</i>	292
Test of Independence Between Two Variables:	
Contingency Table Analysis	298
<i>Performing a Contingency Table Analysis</i>	299
Assumptions for the Chi-Square and Contingency	
Table Tests (χ^2)	302

Nonparametric Tests to Perform When the Parametric Test Cannot Be Performed Due to Violation of the Assumptions	303
Wilcoxon Signed Rank Test (T)	303
<i>Calculation Steps</i>	304
<i>Assumptions for the Wilcoxon Test</i>	308
Mann-Whitney U Test (U)	308
<i>Calculation Steps</i>	308
<i>Assumptions for the Mann-Whitney U Test</i>	312
Kruskal-Wallis Test (H)	315
<i>Calculation Steps</i>	315
<i>Assumptions for the Kruskal-Wallis (H) Test</i>	319
Spearman's Rank Order Correlation (ρ , or r_s)	319
<i>Calculation Steps</i>	319
Effect Sizes and Power	323
<i>Other Resources for Calculating Power</i>	323
Summary	325
Chapter 14 Homework	326
15. Review	329
Choose-the-Appropriate-Test Review	330
Tying-It-All-Together Review	333
<i>Real-World Example</i>	333
Summary	340
Chapter 15 Homework	342
Homework Answers	345
Appendix: Statistical Tables	377
Glossary	399
References	404
Index	405
