

# Detailed Contents

---

*Preface to the Second Edition*  
*Author the Authors*

xvii  
xx

**PART I: THE BASICS OF  
MULTIVARIATE DESIGN 1**

**Chapter 1: An Introduction to  
Multivariate Design 2**

- 1.1: The Use of Multivariate Designs 2
- 1.2: The Definition of the Multivariate Domain 2
- 1.3: The Importance of Multivariate Designs 3
- 1.4: The General Form of a Variate 4
- 1.5: The Type of Variables Combined to Form a Variate 5
- 1.6: The General Organization of the Book 6
- 1.7: Recommended Readings 10

**Chapter 2: Some Fundamental Research  
Design Concepts 11**

- 2.1: Populations and Samples 11
- 2.2: Scales of Measurement 12
- 2.3: Independent Variables, Dependent Variables, and Covariates 18
- 2.4: Between-Subjects and Within-Subjects Independent Variables 21
- 2.5: Latent Variables or Variates and Measured Variables 22
- 2.6: Endogenous and Exogenous Variables 24

- 2.7: Statistical Significance 24
- 2.8: Statistical Power 32
- 2.9: Recommended Readings 36

**Chapter 3A: Data Screening 37**

- 3A.1: Overview 37
- 3A.2: Value Cleaning 38
- 3A.3: Patterns of Missing Values 44
- 3A.4: Overview of Methods of Handling Missing Data 48
- 3A.5: Deletion Methods of Handling Missing Data 49
- 3A.6: Single Imputation Methods of Handling Missing Data 51
- 3A.7: Modern Imputation Methods of Handling Missing Data 54
- 3A.8: Recommendations for Handling Missing Data 57
- 3A.9: Outliers 57
- 3A.10: Using Descriptive Statistics in Data Screening 63
- 3A.11: Using Pictorial Representations in Data Screening 64
- 3A.12: Multivariate Statistical Assumptions Underlying the General Linear Model 67
- 3A.13: Data Transformations 72
- 3A.14: Recommended Readings 73

**Chapter 3B: Data Screening Using IBM SPSS 75**

- 3B.1: The Look of IBM SPSS 75
- 3B.2: Data Cleaning: All Variables 76
- 3B.3: Screening Quantitative Variables 80
- 3B.4: Missing Values: Overview 81
- 3B.5: Missing Value Analysis 81
- 3B.6: Multiple Imputation 89
- 3B.7: Mean Substitution as a Single Imputation Approach 102
- 3B.8: Univariate Outliers 106
- 3B.9: Normality 109
- 3B.10: Linearity 120
- 3B.11: Multivariate Outliers 122
- 3B.12: Screening Within Levels of Categorical Variables 128
- 3B.13: Reporting the Results 136

**PART II: COMPARISONS OF MEANS 139**

**Chapter 4A: Univariate Comparison of Means 140**

- 4A.1: Overview 140
- 4A.2: Means are Compared With Respect to Their Associated Variability 141
- 4A.3: The *t* and *F* Tests 143
- 4A.4: One-Way Between-Subjects Designs 144
- 4A.5: Two-Way (Factorial) Between-Subjects Design 148
- 4A.6: One-Way Within-Subjects Design 152
- 4A.7: Two-Way Simple Mixed Design 153
- 4A.8: One-Way Between-Subjects ANCOVA 156
- 4A.9: The General Linear Model 162
- 4A.10: Recommended Readings 164

**Chapter 4B: Univariate Comparison of Means Using IBM SPSS 165**

- 4B.1: One-Way Between-Subjects Design 165
- 4B.2: Two-Way Between-Subjects Design 172
- 4B.3: One-Way Within-Subjects Design 181
- 4B.4: Simple Mixed Design 187
- 4B.5: Trend Analysis 196
- 4B.6: Analysis of Covariance 201
- 4B.7: One-Way Between-Subjects Design Using Generalized Linear Models 211
- 4B.8: Simple Mixed Design Using Generalized Linear Models 215

**Chapter 5A: Multivariate Analysis of Variance 224**

- 5A.1: Overview 224
- 5A.2: Working With Multiple Dependent Variables 224
- 5A.3: Benefits of and Drawbacks to Using MANOVA 227
- 5A.4: Hotelling's  $T^2$  229
- 5A.5: Multivariate Significance Testing With More Than Two Groups 232
- 5A.6: What to Do After a Significant Multivariate Effect 235
- 5A.7: Advantages of Multivariate Factorial Designs 237
- 5A.8: A Strategy For Examining Two-Way Between-Subjects MANOVA Results 238
- 5A.9: The Time Dimension in Multivariate Data Analysis 242
- 5A.10: Recommended Readings 245

**Chapter 5B: Multivariate Analysis of Variance Using IBM SPSS 247**

- 5B.1: Numerical Example 247
- 5B.2: Alternatives to Performing a MANOVA Analysis 248
- 5B.3: Two-Group MANOVA 248
- 5B.4: *k*-Group MANOVA 257
- 5B.5: Two-Way Between-Subjects Factorial MANOVA 269

**PART III: PREDICTING THE VALUE OF A SINGLE VARIABLE 283**

**Chapter 6A: Bivariate Correlation and Simple Linear Regression 284**

- 6A.1: The Concept of Relationship 284
- 6A.2: Different Types of Relationships 285
- 6A.3: Statistical Significance of the Correlation Coefficient 292
- 6A.4: Strength of Relationship 294
- 6A.5: Pearson Correlation Using a Quantitative Variable and a Dichotomous Nominal Variable 298
- 6A.6: Simple Linear Regression 302
- 6A.7: Statistical Error in Prediction: Why Bother With Regression? 309
- 6A.8: How Simple Linear Regression Is Used 311
- 6A.9: Factors Affecting the Computed Pearson *r* and Regression Coefficients 311
- 6A.10: Recommended Readings 314

**Chapter 6B: Bivariate Correlation and Simple Linear Regression Using IBM SPSS 315**

- 6B.1: Bivariate Correlation: Analysis Setup 315
- 6B.2: Simple Linear Regression 319
- 6B.3: Reporting Results 323

**Chapter 7A: Multiple Regression: Statistical Methods 324**

- 7A.1: General Considerations 324
- 7A.2: A Range of Regression Methods 325
- 7A.3: The Variables in a Multiple Regression Analysis 325
- 7A.4: Multiple Regression Research 327
- 7A.5: The Regression Equations 329
- 7A.6: The Variate in Multiple Regression 332
- 7A.7: The Standard (Simultaneous) Regression Method 333
- 7A.8: Partial Correlation 337
- 7A.9: The Squared Multiple Correlation 338
- 7A.10: The Squared Semipartial Correlation 339
- 7A.11: Structure Coefficients 344
- 7A.12: Statistical Summary of the Regression Solution 345
- 7A.13: Evaluating the Overall Model 346
- 7A.14: Evaluating the Individual Predictor Results 351
- 7A.15: Step Methods of Building the Model 357
- 7A.16: The Forward Method 357
- 7A.17: The Backward Method 358
- 7A.18: The Backward Versus Forward Solutions 358
- 7A.19: The Stepwise Method 359

- 7A.20: Evaluation of the Statistical Methods 361
- 7A.21: Collinearity and Multicollinearity 363
- 7A.22: Recommended Readings 365

**Chapter 7B: Multiple Regression: Statistical Methods Using IBM SPSS 366**

- 7B.1: Standard Multiple Regression 366
- 7B.2: Stepwise Multiple Regression 372

**Chapter 8A: Multiple Regression: Beyond Statistical Regression 382**

- 8A.1: A Larger World of Regression 382
- 8A.2: Hierarchical Linear Regression 382
- 8A.3: Suppressor Variables 386
- 8A.4: Linear and Nonlinear Regression 388
- 8A.5: Dummy and Effect Coding 391
- 8A.6: Moderator Variables and Interactions 396
- 8A.7: Simple Mediation 399
- 8A.8: Recommended Readings 411

**Chapter 8B: Multiple Regression: Beyond Statistical Regression Using IBM SPSS 413**

- 8B.1: Hierarchical Linear Regression 413
- 8B.2: Polynomial Regression 419
- 8B.3: Dummy and Effect Coding 428
- 8B.4: Interaction Effects of Quantitative Variables in Regression 439
- 8B.5: Mediation 457

**Chapter 9A: Multilevel Modeling 466**

- 9A.1: The Name of the Procedure 466
- 9A.2: The Rise of Multilevel Modeling 466
- 9A.3: The Defining Feature of Multilevel Modeling: Hierarchically Structured Data 467
- 9A.4: Nesting and the Independence Assumption 468
- 9A.5: The Intraclass Correlation as an Index of Clustering 469
- 9A.6: Consequences of Violating the Independence Assumption 470
- 9A.7: Some Ways in Which Level 2 Groups Can Differ 472
- 9A.8: The Random Coefficient Regression Model 474
- 9A.9: Centering the Variables 476
- 9A.10: The Process of Building the Multilevel Model 479
- 9A.11: Recommended Readings 483

**Chapter 9B: Multilevel Modeling Using IBM SPSS 484**

- 9B.1: Numerical Example 484
- 9B.2: Assessing the Unconditional Model 484
- 9B.3: Centering the Variables 490
- 9B.4: Building the Multilevel Models: Overview 493
- 9B.5: Building the First Model 496
- 9B.6: Building the Second Model 504
- 9B.7: Building the Third Model 509
- 9B.8: Building the Fourth Model 515
- 9B.9: Reporting Multilevel Modeling Results 519

**Chapter 10A: Binary and Multinomial  
Logistic Regression and ROC  
Analysis 522**

- 10A.1: Overview 522
- 10A.2: The Variables in Logistic Regression Analysis 523
- 10A.3: Assumptions of Logistic Regression 524
- 10A.4: Coding of the Binary Variables in Logistic Regression 524
- 10A.5: The Logistic Regression Model 528
- 10A.6: Logistic Regression and Odds 530
- 10A.7: The Logistic Regression Model 532
- 10A.8: Calculating the Changes of Cases Belonging to the Target Group 534
- 10A.9: Binary Logistic Regression With a Single Binary Predictor 534
- 10A.10: Binary Logistic Regression With a Single Quantitative Predictor 536
- 10A.11: Binary Logistic Regression With a Categorical and a Quantitative Predictor 540
- 10A.12: Evaluating the Logistic Model 541
- 10A.13: Strategies For Building the Logistic Regression Model 544
- 10A.14: ROC Analysis 545
- 10A.15: Recommended Readings 556

**Chapter 10B: Binary and Multinomial  
Logistic Regression and ROC  
Analysis Using IBM SPSS 557**

- 10B.1: Binary Logistic Regression 557
- 10B.2: ROC Analysis 565
- 10B.3: Multinomial Logistic Regression 575

**PART IV: ANALYSIS OF  
STRUCTURE 585**

**Chapter 11A: Discriminant Function  
Analysis 586**

- 11A.1: Overview 586
- 11A.2: Discriminant Function Analysis and Logistic Analysis Compared 588
- 11A.3: Discriminant Function Analysis and MANOVA 588
- 11A.4: Assumptions Underlying Discriminant Function Analysis 589
- 11A.5: Sample Size for Discriminant Analysis 590
- 11A.6: The Discriminant Function 590
- 11A.7: The Number of Discriminant Functions That Can Be Extracted 592
- 11A.8: Dynamics of Extracting Discriminant Functions 593
- 11A.9: Testing Statistical Significance 594
- 11A.10: Evaluating the Quality of the Solution 596
- 11A.11: Coefficients Associated With the Interpretation of Discriminant Functions 601
- 11A.12: Different Discriminant Function Methods 606
- 11A.13: Recommended Readings 608

**Chapter 11B: Discriminant Function  
Analysis Using IBM SPSS 609**

- 11B.1: Two-Group Discriminant Function Analysis Setup 609
- 11B.2: Two-Group Discriminant Function Analysis Output 613

- 11B.3: Reporting the Results of a Two-Group Discriminant Function Analysis 620
- 11B.4: Three-Group Discriminant Function Analysis Setup 622
- 11B.5: Three-Group Discriminant Function Analysis Output 625
- 11B.6: Reporting the Results of a Three-Group Discriminant Function Analysis 637

**Chapter 12A: Principal Components Analysis and Exploratory Factor Analysis 640**

- 12A.1: Orientation and Terminology 640
- 12A.2: How Factor Analysis Is Used in Psychological Research 641
- 12A.3: Origins of Factor Analysis 641
- 12A.4: The General Organization of This Chapter 642
- 12A.5: Where the Analysis Begins: The Correlation Matrix 642
- 12A.6: Acquiring Perspective on Factor Analysis 648
- 12A.7: Distinctions Within Factor Analysis 651
- 12A.8: The First Phase: Component Extraction 652
- 12A.9: Distances of Variables From a Component 658
- 12A.10: Principal Components Analysis Versus Factor Analysis 662
- 12A.11: Different Extraction Methods 664
- 12A.12: Recommendations Concerning Extraction 666
- 12A.13: The Rotation Process 667
- 12A.14: Orthogonal Factor Rotation 672
- 12A.15: Oblique Factor Rotation 673

- 12A.16: Choosing Between Orthogonal and Oblique Rotation Strategies 674
- 12A.17: The Factor Analysis Printout 676
- 12A.18: Interpreting Factors 680
- 12A.19: Selecting the Factor Solution 683
- 12A.20: Sample Size Issues 686
- 12A.21: Recommended Readings 687

**Chapter 12B: Principal Components Analysis and Exploratory Factor Analysis Using IBM SPSS 688**

- 12B.1: Numerical Example 688
- 12B.2: Preliminary Principal Components Analysis 690
- 12B.3: Principal Components Analysis With a Promax Rotation: Two-Component Solution 700
- 12B.4: ULS Analysis With a Promax Rotation: Two-Factor Solution 704
- 12B.5: Wrap-Up of the Two-Factor Solution 708
- 12B.6: Looking For Six Dimensions 708
- 12B.7: Principal Components Analysis With a Promax Rotation: Six-Component Solution 708
- 12B.8: ULS Analysis With a Promax Rotation: Six-Component Solution 713
- 12B.9: Principal Axis Factor Analysis With a Promax Rotation: Six-Component Solution 717
- 12B.10: Wrap-Up of the Six-Factor Solution 720
- 12B.11: Assessing Reliability: General Principles 721
- 12B.12: Assessing Reliability: The Global Domains 724

- 12B.13: Assessing Reliability: The Six Item Sets Based on the ULS/Promax Structure 729
- 12B.14: Computing Scales Based on the ULS Promax Structure 729
- 12B.15: Using the Computed Variables in Further Analyses 736
- 12B.16: Reporting the Results 745

**Chapter 13A: Canonical Correlation Analysis 750**

- 13A.1: Overview 750
- 13A.2: Canonical Functions or Roots 751
- 13A.3: The Index of Shared Variance 752
- 13A.4: The Dynamics of Extracting Canonical Functions 753
- 13A.5: Testing Statistical Significance 754
- 13A.6: The Multivariate Tests 755
- 13A.7: Redundancy Index 756
- 13A.8: Coefficients Associated With the Canonical Functions 757
- 13A.9: Interpreting the Canonical Functions 758
- 13A.10: Recommended Readings 758

**Chapter 13B: Canonical Correlation Analysis Using IBM SPSS 759**

- 13B.1: Canonical Correlation: Analysis Setup 759
- 13B.2: Canonical Correlation: Overview of Output 760
- 13B.3: Canonical Correlation: Multivariate Tests of Significance 761
- 13B.4: Canonical Correlation: Eigenvalues and Canonical Correlations 761

- 13B.5: Canonical Correlation: Dimension Reduction Analysis 763
- 13B.6: Canonical Correlation: How Many Functions Should Be Interpreted? 764
- 13B.7: Canonical Correlation: The Coefficients in the Output 764
- 13B.8: Canonical Correlation: Interpreting the Dependent Variates 765
- 13B.9: Canonical Correlation: Interpreting the Predictor Variates 766
- 13B.10: Canonical Correlation: Interpreting the Canonical Functions 767
- 13B.11: Reporting Canonical Correlation Analysis Results 768

**Chapter 14A: Multidimensional Scaling 770**

- 14A.1: Overview 770
- 14A.2: The Paired Comparison Method 771
- 14A.3: Dissimilarity Data in MDS 772
- 14A.4: Similarity/Dissimilarity Conceived as an Index of Distance 773
- 14A.5: Dimensionality in MDS 774
- 14A.6: Data Collection Methods 775
- 14A.7: Similarity Versus Dissimilarity 777
- 14A.8: Distance Models 778
- 14A.9: A Classification Schema for MDS Techniques 780
- 14A.10: Types of MDS Models 782
- 14A.11: Assessing Model Fit 784
- 14A.12: Recommended Readings 788

**Chapter 14B: Multidimensional Scaling  
Using IBM SPSS 790**

- 14B.1: The Structure of This Chapter 790
- 14B.2: Metric CMDS 790
- 14B.3: Nonmetric CMDS 799
- 14B.4: Metric WMDS 807

**Chapter 15A: Cluster Analysis 818**

- 15A.1: Introduction 818
- 15A.2: Two Types of Clustering 818
- 15A.3: Hierarchical Clustering 819
- 15A.4: *k*-Means Clustering 829
- 15A.5: Recommended Readings 832

**Chapter 15B: Cluster Analysis Using IBM  
SPSS 833**

- 15B.1: Hierarchical Cluster Analysis 833
- 15B.2: *k*-Means Cluster Analysis 841

**PART V: FITTING MODELS TO  
DATA 849**

**Chapter 16A: Confirmatory Factor  
Analysis 850**

- 16A.1: Overview 850
- 16A.2: The General Form of a Confirmatory Model 851
- 16A.3: The Difference Between Latent and Indicator Variables 852
- 16A.4: Contrasting Principal Components Analysis, Exploratory Factor Analysis, and Confirmatory Factor Analysis 853
- 16A.5: Confirmatory Factor Analysis Is Theory Based 860
- 16A.6: The Logic of Performing a Confirmatory Factor Analysis 861
- 16A.7: Model Specification 861
- 16A.8: Model Identification 862

- 16A.9: Model Estimation 866
- 16A.10: Model Evaluation Overview 867
- 16A.11: Assessing Fit of Hypothesized Models 868
- 16A.12: Model Estimation: Assessing Pattern/Structure Coefficients 873
- 16A.13: Model Respecification 874
- 16A.14: General Considerations 878
- 16A.15: Recommended Readings 879

**Chapter 16B: Confirmatory Factor  
Analysis Using Amos 880**

- 16B.1: Using Amos 880
- 16B.2: Numerical Example 880
- 16B.3: Model Specification 881
- 16B.4: Model Identification 885
- 16B.5: Performing the Analysis 888
- 16B.6: Working With the Analysis Output 890
- 16B.7: Considering the Respecification of the Model 894
- 16B.8: Respecifying the Model 898
- 16B.9: Output From the Respecification 898
- 16B.10: Reporting Confirmatory Factor Analysis Results 901

**Chapter 17A: Path Analysis: Multiple  
Regression 903**

- 17A.1: Overview 903
- 17A.2: Principles of Path Analysis 904
- 17A.3: Causality and Path Analysis 905
- 17A.4: The Concept of a Path Model 907
- 17A.5: The Roles Played by Variables in a Path Structure 907
- 17A.6: The Assumptions of Path Analysis 909

17A.7: Missing Values in Path Analysis	910
17A.8: Analyzing the Path Structure	911
17A.9: The Multiple Regression Approach to Path Analysis	911
17A.10: Indirect and Total Effects	913
17A.11: Comparing Multiple Regression and Model-Fitting Approaches	914
17A.12: A Path Analysis Example	914
17A.13: The Multiple Regression Strategy to Perform a Path Analysis	916
17A.14: Examining Mediation Effects	917
17A.15: Respecifying the Model	919
17A.16: Recommended Readings	920

**Chapter 17B: Path Analysis: Multiple Regression Using IBM SPSS 921**

17B.1: The Data Set and Model Used in Our Example	921
17B.2: Specifying the Variables in Each Analysis	921
17B.3: Predicting Exercise	923
17B.4: Predicting Diet	925
17B.5: Predicting Social Desirability	926
17B.6: Predicting Acceptance	927
17B.7: Mediation Effects in the Larger Model	929
17B.8: Reporting Path Analysis Results	934

**Chapter 18A: Path Analysis: Structural Modeling 937**

18A.1: The Model-Fitting Approach to Path Analysis	937
18A.2: Comparing Multiple Regression and Model-Fitting Approaches	938

18A.3: The Model-Fitting Strategy to Perform a Path Analysis With Only Measured Variables	940
18A.4: Differences Between Regression and Structural Equations	940
18A.5: The Analysis of a Structural Model	941
18A.6: Configuring the Structural Model	942
18A.7: Identifying the Structural Model	942
18A.8: The Model Results	944
18A.9: Respecifying the Model	946
18A.10: Respecified Model Results	948
18A.11: Recommended Readings	949

**Chapter 18B: Path Analysis: Structural Modeling Using Amos 951**

18B.1: Overview	951
18B.2: The Data Set and Model Used in Our Example	951
18B.3: Drawing the Model	952
18B.4: Model Identification	954
18B.5: Performing the Analysis	955
18B.6: The Analysis Output	956
18B.7: The Structural Model	961
18B.8: Specification Search to Delete Paths	961
18B.9: Reporting Path Analysis Results	972

**Chapter 19A: Structural Equation Modeling 974**

19A.1: Overview	974
19A.2: The Measurement and Structural Models	974
19A.3: From Path Analysis to SEM	975
19A.4: Building a Structural Model From Our Path Model	977

19A.5: Results for our Structural Model	979
19A.6: Recommended Readings	981
<b>Chapter 19B: Structural Equation Modeling Using Amos</b>	<b>982</b>
19B.1: Overview	982
19B.2: The Example We Use	983
19B.3: The Variables in Our Example Model	984
19B.4: The Measurement Model	984
19B.5: The Variables Configured in the Full Structural Model	988
19B.6: Performing the Analysis	988
19B.7: Output for the Full Structural Model	990
19B.8: Respecification of the Model	994
19B.9: Output for the Full Respecified Structural Model	995
19B.10: Reporting SEM Analysis Results	998
<b>Chapter 20A: Model Invariance: Applying a Model to Different Groups</b>	<b>1001</b>
20A.1: Overview	1001
20A.2: The General Strategy Used to Compare Groups	1002
20A.3: The Omnibus Model Comparison Phase	1002
20A.4: The Coefficient Comparison Phase	1005
20A.5: Recommended Readings	1005
<b>Chapter 20B: Assessing Model Invariance Using Amos</b>	<b>1007</b>
20B.1: Overview	1007
20B.2: Confirmatory Factor Analysis	1007
20B.3: Path Analysis	1018
<b>References</b>	<b>1032</b>
<b>Appendix A: Statistics Tables</b>	<b>1056</b>
<b>Appendix B: Selected IBM SPSS Amos Menus and Commands</b>	<b>1058</b>
<b>Author Index</b>	<b>1063</b>
<b>Subject Index</b>	<b>1072</b>
